# Background: Current VLMs struggle to understand concepts beyond nouns

## Visual Genome Relation

Assessing relational understanding (23,937 test cases)

- ✓ the horse is eating the grass
- X the grass is eating the horse

## Visual Genome Attribution

Assessing attributive understanding (28,748 test cases)

- ✓ the paved road and the white house
- X the white road and the paved house

BLIP

the grass is eating the horse 81%

the horse is eating the grass 78%

Recent VLMs face challenges in understanding visual language concepts beyond object nouns (e.g., recognizing attributes, relations, states)

## Background: How about actions?

? "Book **falling** like a rock" ✓  
*Original Action Text*

? "Book **rising** like a rock" ✗  
*Action Antonym Text*

The understanding of the cause and effect of actions in textual, visual, and temporal dimensions

**Action Knowledge**

# ActionBench: Do SOTA VidLM really understand actions?

## ➤ Action Dynamics Benchmark (ActionBench) based on two VL datasets: SSV2, Ego4d

- Probing tasks: Action Antonym (AA), Video Reversal (VR)
- Baseline task: Object Replacement (OR)

### Probing Task: Action Antonym (AA)

"Book **falling** like a rock"  
*Original Action Text*

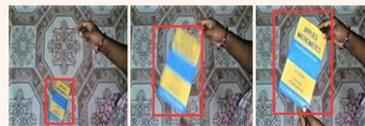

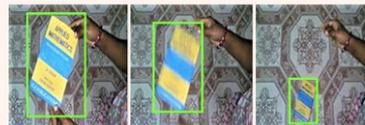

"Book **rising** like a rock"  
*Action Antonym Text*

GT VidLM  
Result  
✓ 23.2%

✗ 76.8%

### Probing Task: Video Reversal (VR)

"Book **falling** like a rock"  
*Original Action Text*

GT VidLM  
Result  
✓ 49.9%

✗ 50.1%

### Baseline Task: Object Replacement (OR)

"**Book** falling like a rock"  
*Original Action Text*

"**Cellphone** falling like a rock"  
*Object Replaced Text*

GT VidLM  
Result  
✓ 77.9%

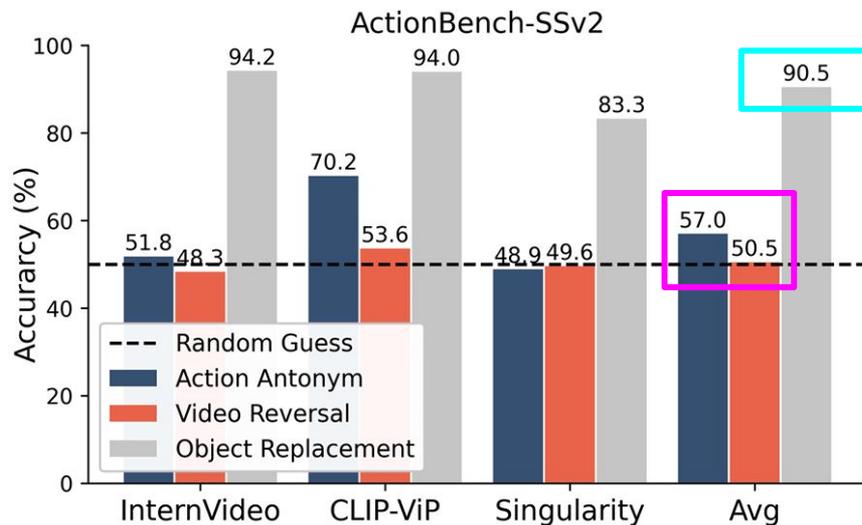

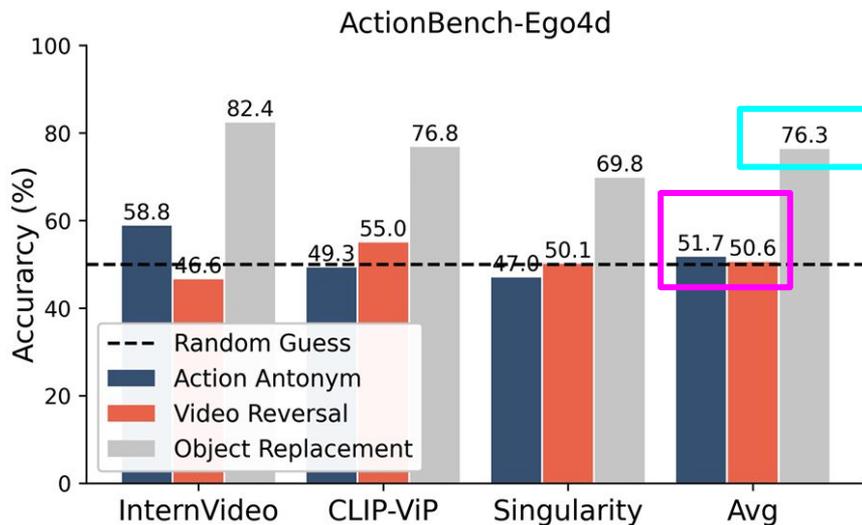

✗ 22.1%

# ActionBench: Do SOTA VidLM really understand actions?

## ➤ Evaluating SOTA VidLMs on ActionBench

Near random performance on **Action Antonym (AA)** and **Video Reversal (VR)**

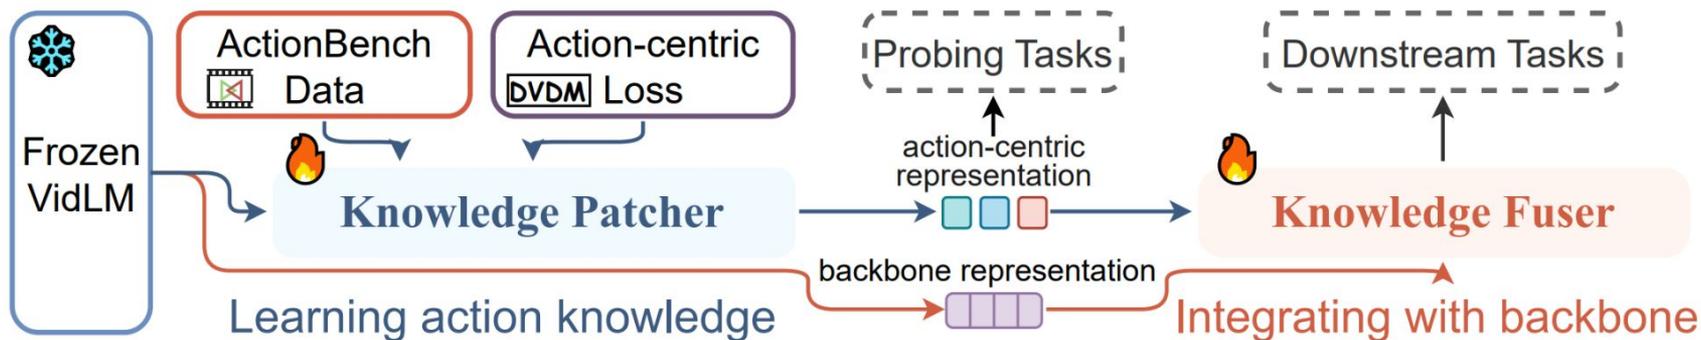

Clear **biases towards object nouns** compared to actions

# PAXION Framework Overview

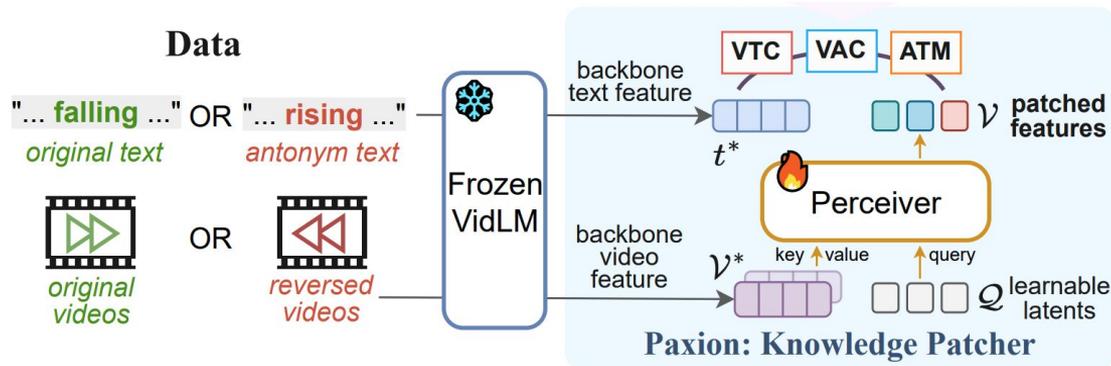

## ➤ Patch → Fuse

How can we **patch action knowledge** into existing VidLMs **without compromising their general VL capabilities?**

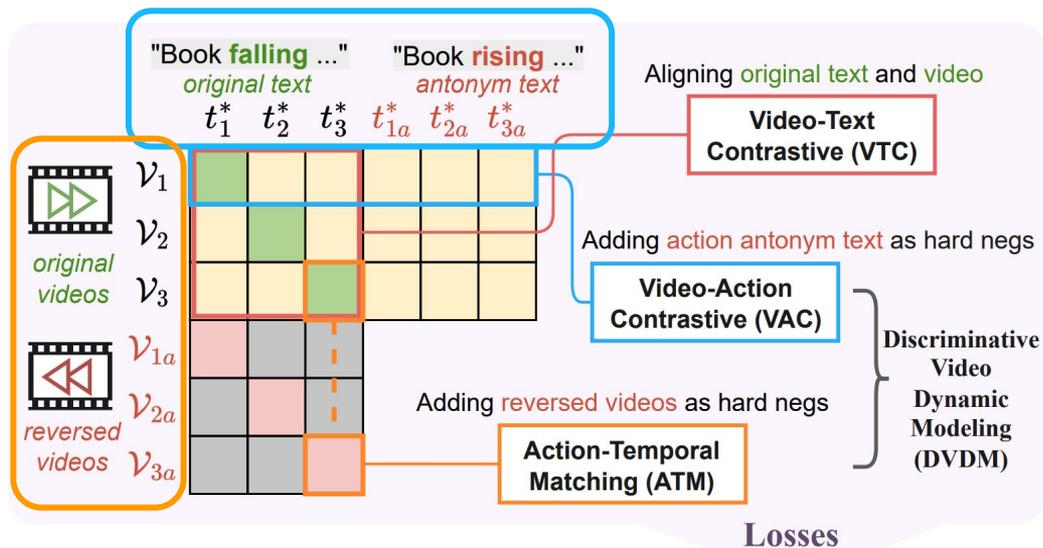

# PAXION

# Knowledge Patcher: Patching frozen VLMs with Action Knowledge

A light-weight  
**Perceiver-based**  
module attached to a  
frozen VidLM

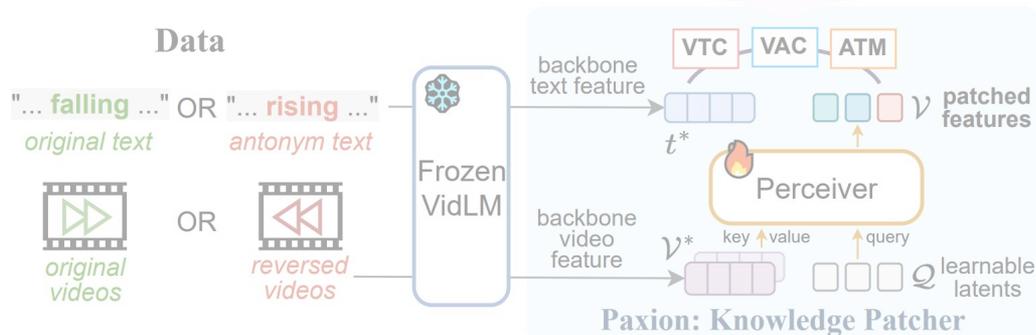

# Knowledge Patcher: Patching frozen VLMs with Action Knowledge

**New training objects**  
**DVDM** (VAC, ATM losses)  
 to force the model to  
 encode action dynamics

**Video-Action Contrastive (VAC):**  
 encourages learning the  
**alignment** between the **video** and  
 the **action verbs**

**Action-Temporal Matching:**  
 encourages learning the correct  
**temporal ordering** implied by the  
**action text**

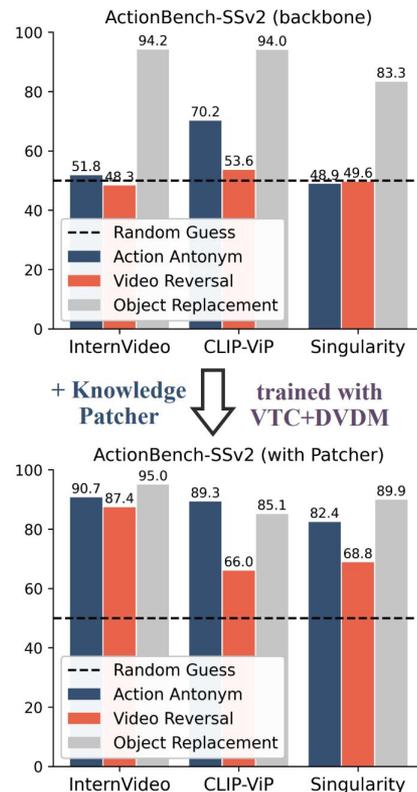

# Knowledge Patcher: Patching frozen VLMs with Action Knowledge

DVDM objectives significantly improves action understanding (near-random  $\Rightarrow$  ~80%)

# Knowledge Fuser: Retaining VL capabilities while leveraging the patched action knowledge

How can we patch action knowledge into existing VidLMs **without compromising their general VL capabilities?**

**The KP representation is highly specialized in action understanding**

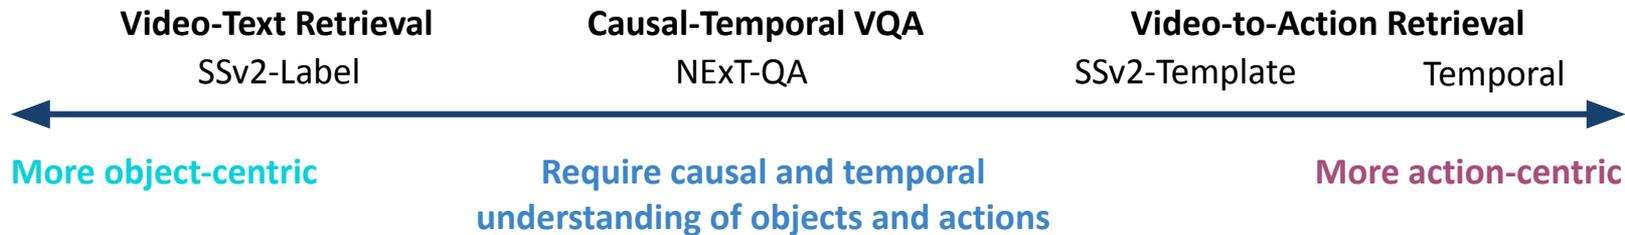

## Knowledge Fuser: Retaining VL capabilities while leveraging the patched action knowledge

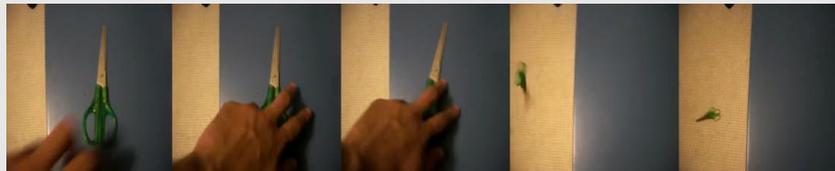

A light-weight cross-attention module which **fuses the learned Knowledge Patcher features** with the **frozen backbone features**

# Knowledge Fuser: Retaining VL capabilities while leveraging the patched action knowledge

## ➤ Downstream Tasks

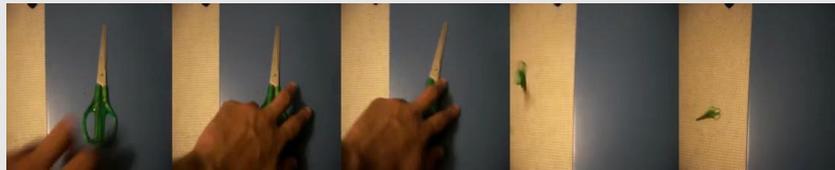

Video-Text  
Retrieval  
Example

SSv2-label

"pushing **scissors** so  
that it falls off the table"

Video-to-A  
ction  
Retrieval  
Example

SSv2-template (where the main object is obfuscated)

"pushing **something** so  
that it falls off the table"

# Knowledge Fuser: Retaining VL capabilities while leveraging the patched action knowledge

## ➤ Downstream Task Results

**PAXION with Knowledge Fuser** outperforms/performs competitively with VTC-only baselines on both object-centric and action-centric tasks

Paxion helps more on T and C questions, and on ATP-hard where the temporal and action knowledge is emphasized

# Knowledge Fuser: Retaining VL capabilities while leveraging the patched action knowledge

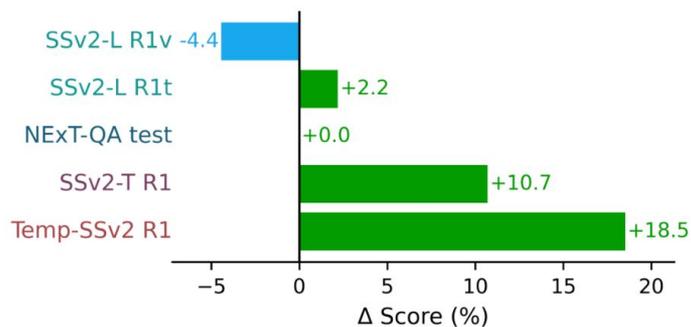

## ➤ Analysis

Finetune v.s. Fuse

Compared setting: Finetune Knowledge Patcher[VTC+DVDM] w/o a Knowledge Fuser

Knowledge Fuser is essential for retaining object understanding capabilities

VTC v.s. VTC+DVDM

Compared setting: Add Knowledge Fuser to a Knowledge Patcher trained with only VTC loss

DVDM patching improves action understanding on downstream tasks

# Qualitative Examples of PAXION
