

Open-Vocabulary Semantic Segmentation via Attribute Decomposition-Aggregation

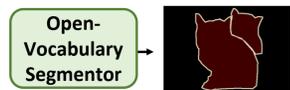

Chaofan Ma, Yuhuan Yang, Chen Ju, Fei Zhang, Ya Zhang, Yanfeng Wang

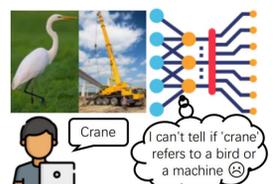

Closed-Set to Open-Vocabulary

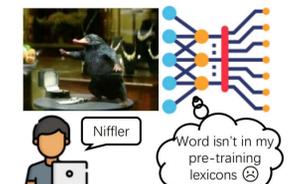

Problems

Unrealistic assumptions in real-world scenarios:
the given new textual categories should *accurate, complete, and exist in the pre-trained lexicons.*

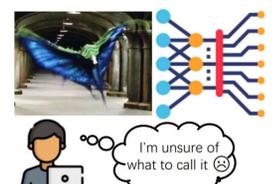

(1) Ambiguity:
brief or incomplete class names bring lexical ambiguity

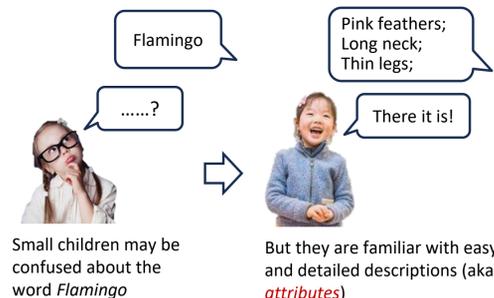

(2) Neologisms:
new words may not in the lexicons during vision-language pre-training

(3) Unnameability:
difficult-to-describe categories create labeling problems for users

Motivation

If we and our small child went to the zoo and asked for the *flamingo*...

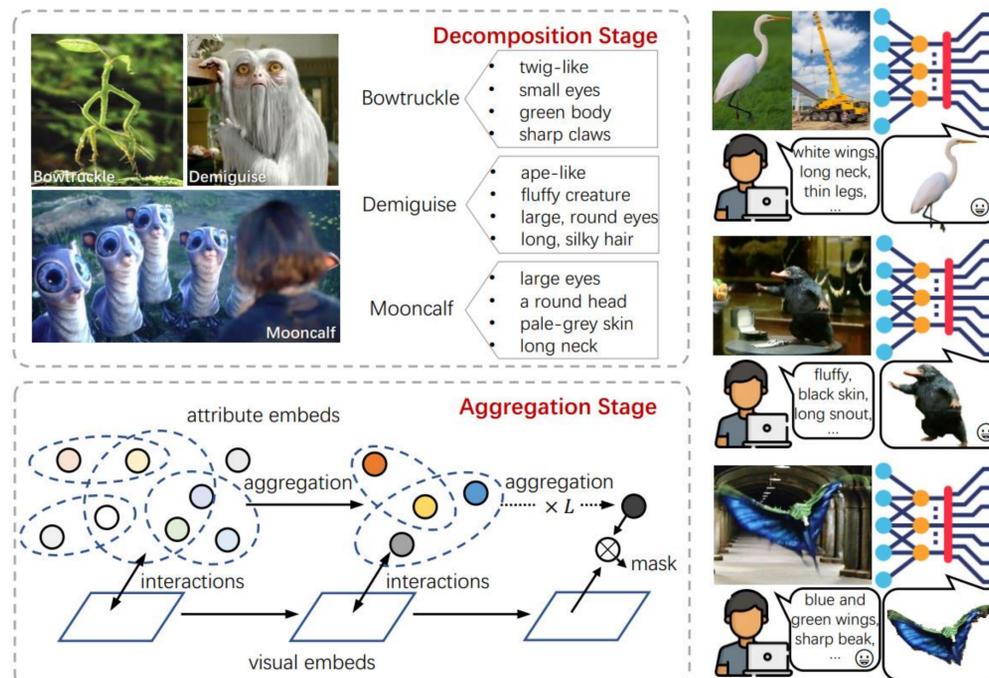

Cognitive psychology
when human understanding new concepts

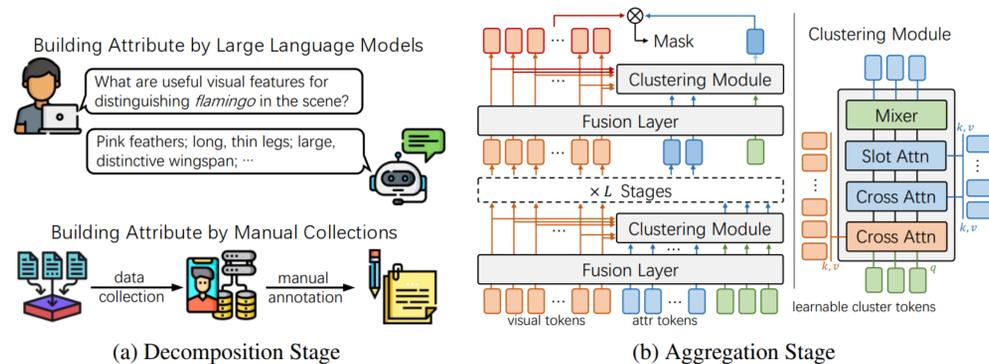

Attributes:
detailed descriptions from multiple distinct or complementary perspectives

- Attributes can ...
- For ambiguity**
make up for missing context information to achieve completeness
 - For neologisms**
transformed into known attributes, easily interpreted by pre-trained language models
 - For unnameability**
used for replace in a more detailed manner

Overview

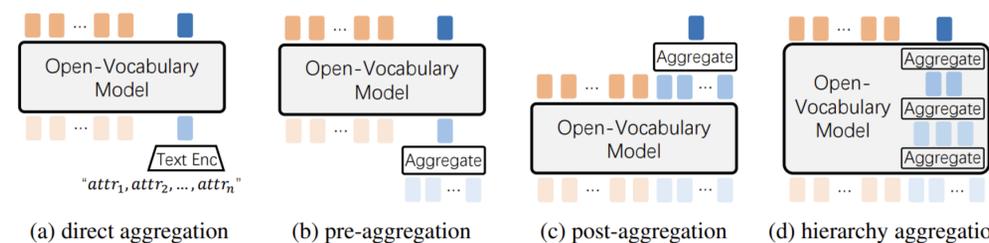

Framework

- (a) **Decomposition stage:** to build various attribute descriptions (by querying LLM for existing datasets and manually collecting a dataset of rare categories)
- (b) **Aggregation stage:** to combine separate attribute pieces into an integrated global description, which then serves as a classifier to differentiate the target object from others

Optional Designs

Experimental Results

Table 1: **Evaluation on PASCAL-5ⁱ and COCO-20ⁱ.** For textual inputs, we compare “cls name” (category names) and “attr” (attributes). “direct”, “pre-”, “post-” and “hrchy” are four aggregation strategies in Sec. 3.4.4.

Model	Settings	Backbone	PASCAL-5 ⁱ					COCO-20 ⁱ				
			5 ⁰	5 ¹	5 ²	5 ³	mIoU	20 ⁰	20 ¹	20 ²	20 ³	mIoU
SPNet [46]	cls name	RN101	23.8	17.0	14.1	18.3	18.3	-	-	-	-	-
ZS3Net [7]	cls name	RN101	40.8	39.4	39.3	33.6	38.3	18.8	20.1	24.8	20.5	21.1
LSeg [25]	cls name	RN101	52.8	53.8	44.4	38.5	47.4	22.1	25.1	24.9	21.5	23.4
LSeg [25]	cls name	ViT-L	61.3	63.6	43.1	41.0	52.3	28.1	27.5	30.0	23.2	27.2
LSeg [25]	attr (direct)	RN101	48.6	51.2	39.7	36.2	44.0	20.9	23.6	20.8	18.4	20.9
LSeg [25]	attr (pre-)	RN101	49.1	51.4	40.9	35.9	44.3	21.7	24.5	22.0	19.6	22.0
LSeg [25]	attr (post-)	RN101	50.0	52.2	42.1	36.8	45.3	21.2	24.0	22.5	19.2	21.7
AttrSeg (Ours)	attr (hrchy)	RN101	52.9	55.3	45.0	43.1	49.1	27.6	28.4	26.1	22.7	26.2
AttrSeg (Ours)	attr (hrchy)	ViT-L	61.5	67.5	46.1	50.5	56.4	34.8	32.6	31.6	24.2	30.8

Table 3: **Evaluation on Fantastic Beasts (transferred from PASCAL-5ⁱ and COCO-20ⁱ).** For textual inputs, we compare “cls name” (category names) and “attr” (attributes). “direct”, “pre-”, “post-” and “hrchy” are four aggregation strategies. 5ⁱ and 20ⁱ refer to the best checkpoints of *i*th fold of two datasets used for evaluation.

Model	Settings	Backbone	PASCAL-5 ⁱ					COCO-20 ⁱ				
			5 ⁰	5 ¹	5 ²	5 ³	mIoU	20 ⁰	20 ¹	20 ²	20 ³	mIoU
LSeg [25]	cls name	RN101	<10	<10	<10	<10	<10	<10	<10	<10	<10	<10
LSeg [25]	attr (direct)	RN101	44.8	46.6	46.4	46.2	46.0	50.1	51.2	51.7	49.3	50.6
LSeg [25]	attr (pre-)	RN101	46.4	47.7	48.2	47.3	47.4	51.3	52.7	52.9	50.9	52.0
LSeg [25]	attr (post-)	RN101	46.9	48.3	48.8	47.7	47.9	52.8	52.5	52.4	51.2	52.2
AttrSeg (Ours)	attr (hrchy)	RN101	50.7	53.4	53.6	51.3	52.3	56.4	54.9	55.7	55.3	55.6
AttrSeg (Ours)	attr (hrchy)	ViT-L	54.1	55.8	55.4	54.5	55.0	59.2	58.8	58.3	58.5	58.7

Visualizations

(a) **Category:** Erumpent. **Main Attributes:** "large creature", "rhinoceros-like creature", "a thick hide", "a horn on its nose", "huge, grey beast", "grey beast", "resembles a rhinoceros", "roundish body", "single long horn", "thick tail"

(b) **Category:** Doxy. **Main Attributes:** "fairy-like creature", "small creature", "thick hair", "black hair", "four wings", "a pair of sharp pincers", "four arms and four legs", "beetle-like wings", "two rows of teeth"

(c) **Category:** Grindylow. **Main Attributes:** "small creature", "octopus-like creature", "long tentacles with suckers", "blue-green skin", "bulbous eyes", "large eyes", "pale-green", "pointed fangs", "long, brittle fingers"
