# Minecraft?

- In simple terms the point of Minecraft is that it gives players unlimited opportunities to be creative, with no limits.
- It is commonly used for education, 3D modeling, architecture design, and so on in Minecraft virtual worlds.
- Minecraft is one of the most popular PC game in the world.

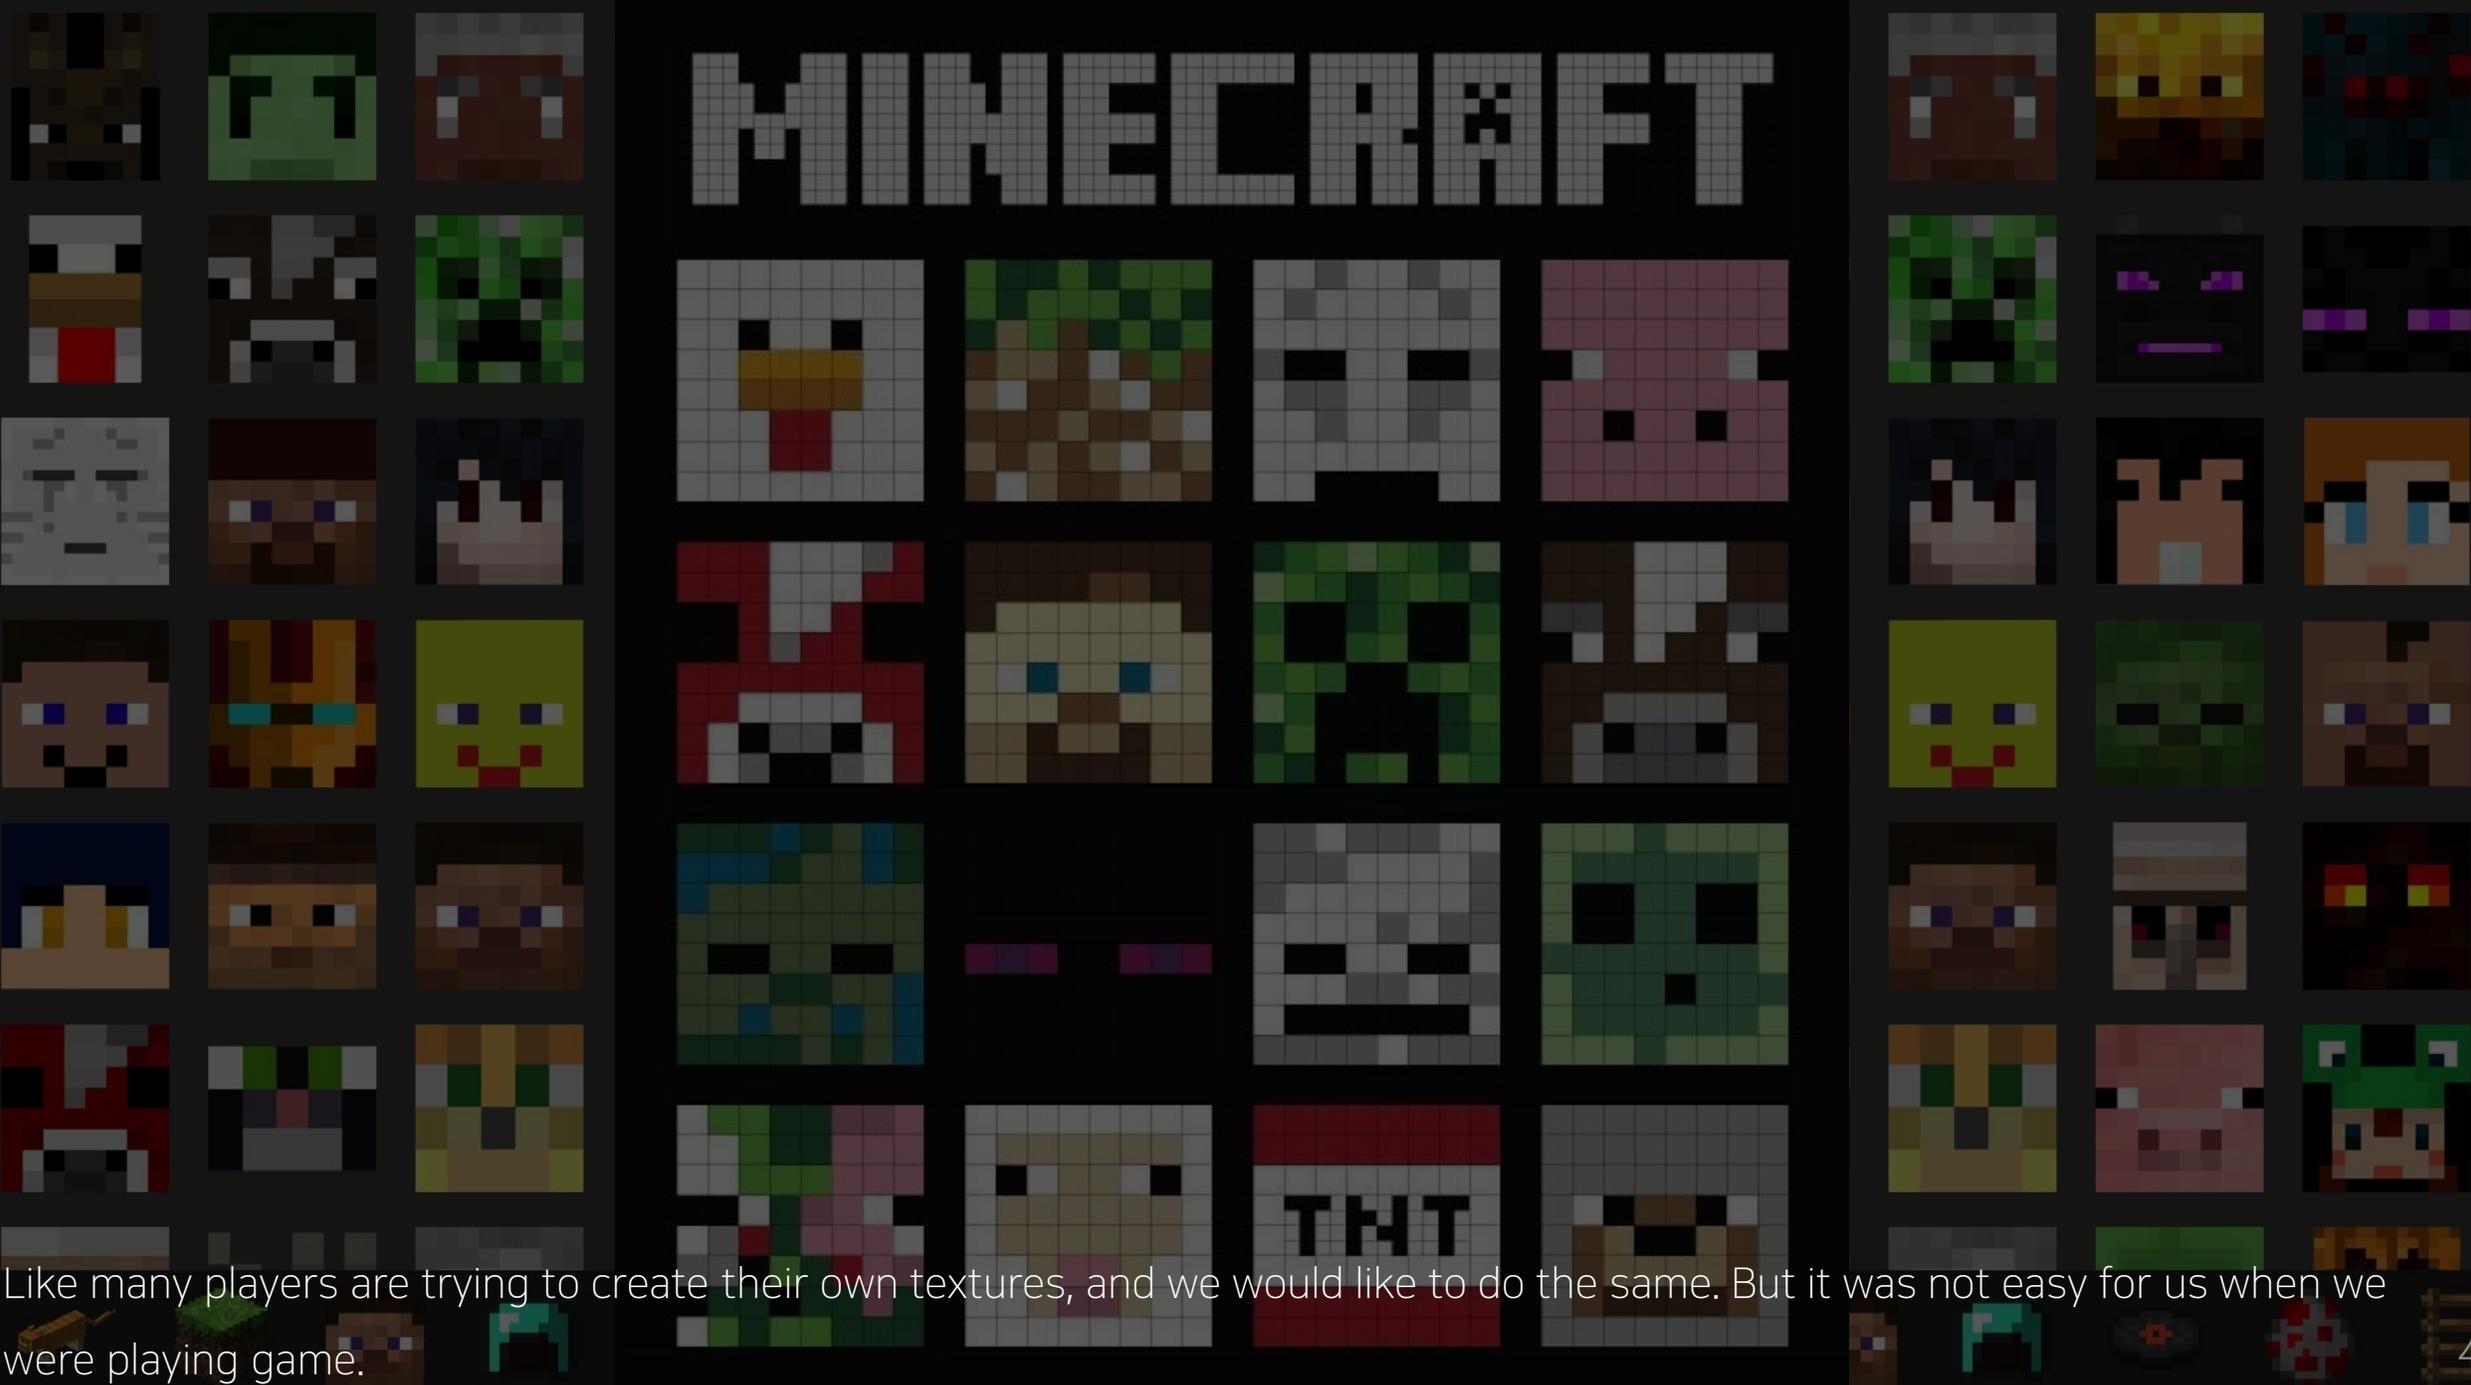

# MINECRAFT

A screenshot of a Minecraft world showing a grassy field with several trees under a clear blue sky. The trees have a blocky, pixelated appearance. The text 'Custom Texture Creation in Minecraft\* World' is overlaid on the left side of the image.

## Custom Texture Creation in Minecraft\* World

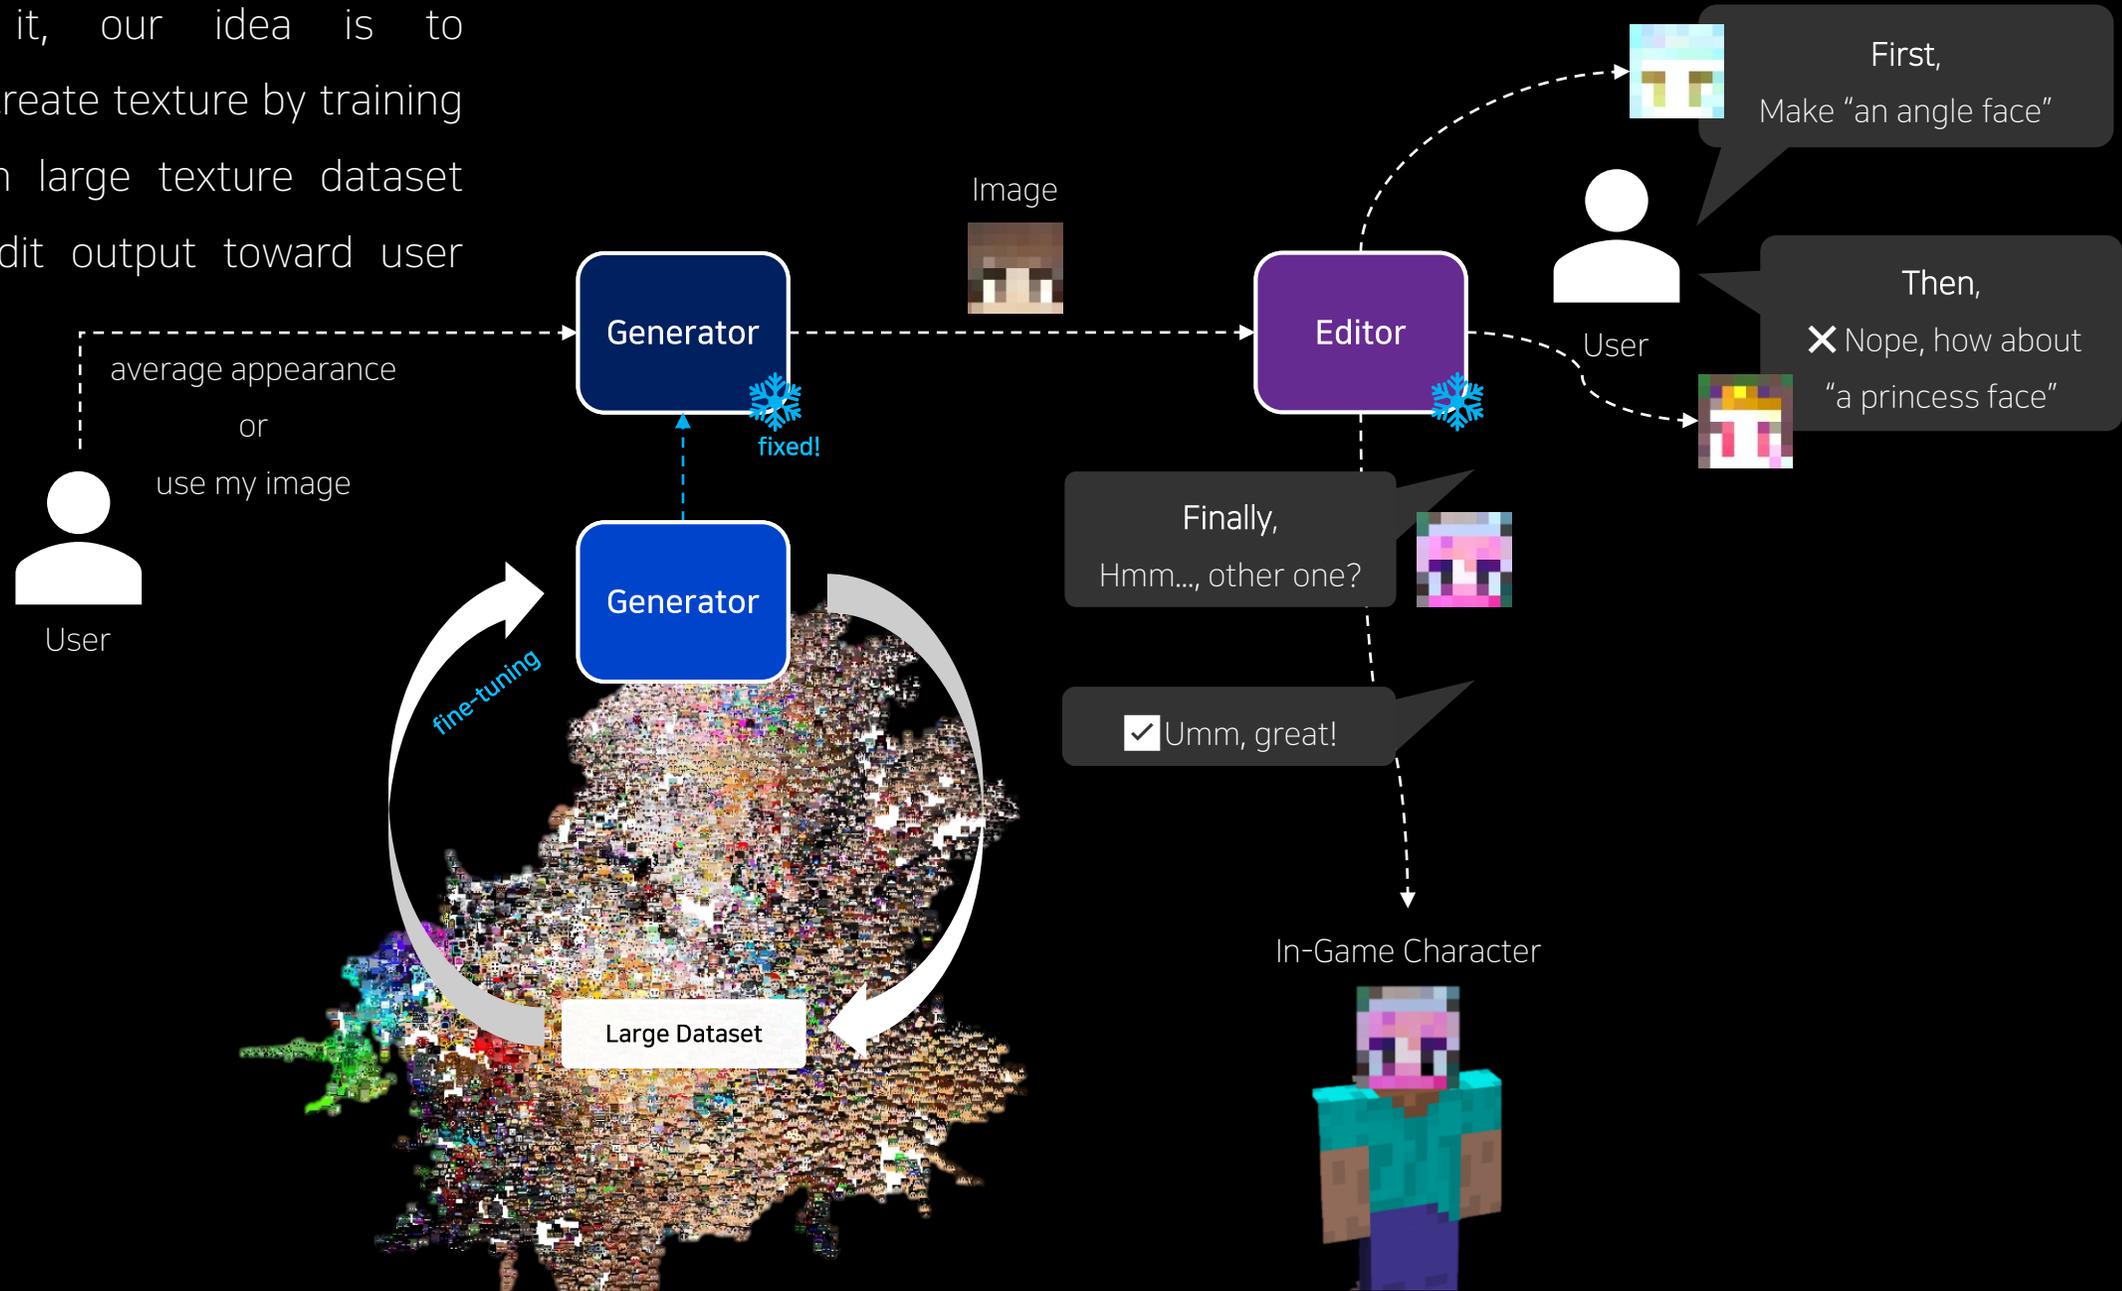

- For players, textures are a kind of identity in the virtual world to show other users their personal individuality.
- However, creating a custom texture from scratch is burdensome and takes a lot of time, but the result is still an unsatisfactory look.

# MINECRAFT

Like many players are trying to create their own textures, and we would like to do the same. But it was not easy for us when we were playing game.

To address it, our idea is to automatically create texture by training generator with large texture dataset and further edit output toward user intention.

Here, we drew the figure by supposing that user select average appearance case.

# Contributions

In the perspective of player, we would like to support all the user intention by providing AI-feature as much as possible.

- Ours should allow user to generate random texture  
→ random generation from gaussian distribution
- Ours also allow user to further manipulate it toward their imaginary.  
→ optimization via CLIP through inputted text
- If they want, ours accept user-provided image for manipulation.  
→ GAN inversion

# Process #1

## Generation (Feed-forward.) #1-1

Input : random seed

Output : 3 x 512 vector, 8 x 8 image

random

average

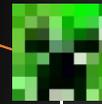

Generation

## Inversion (Optim.\*) #1-2

Input : 3 x H x W, image

Output : 3 x 512 vector

Inversion

# Process #2

## Editing (Optim.\*)

Input : 3 x 512 vector, tokenized text

Output : 8 x 8 image

vector + "text"

vector + "text"

Editing

select one option!

\*In optimization process, we omit intermediate data

# Result

## Inversion Editing

## Editing

# Thank you for your attention!
